

User manual

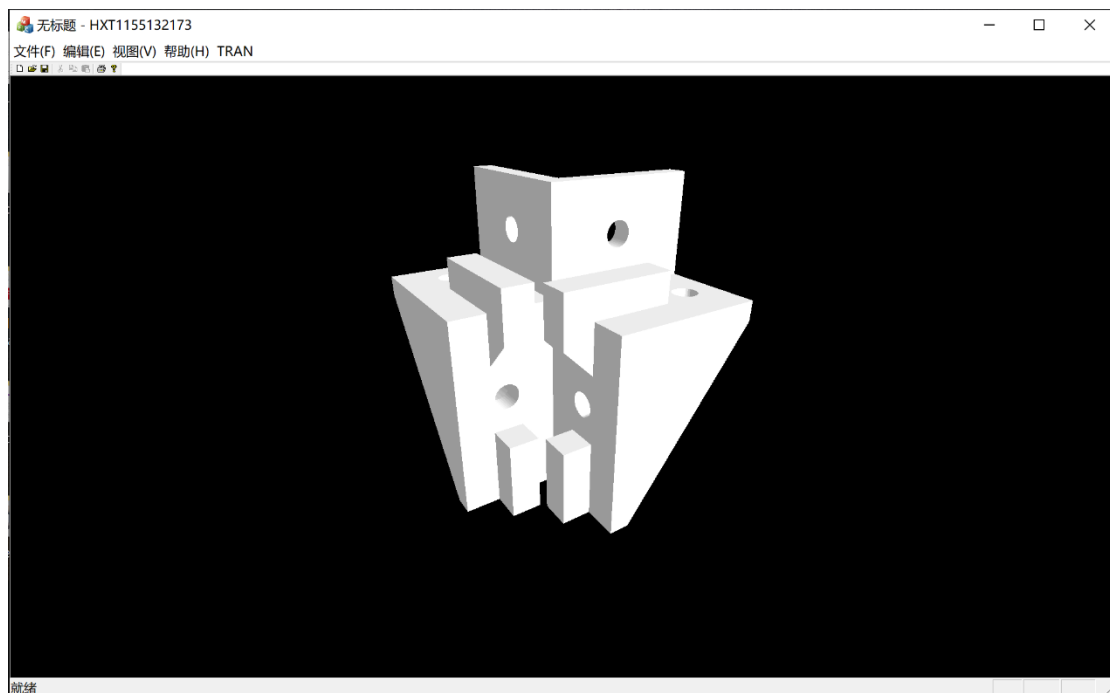

First, run the MFC program.

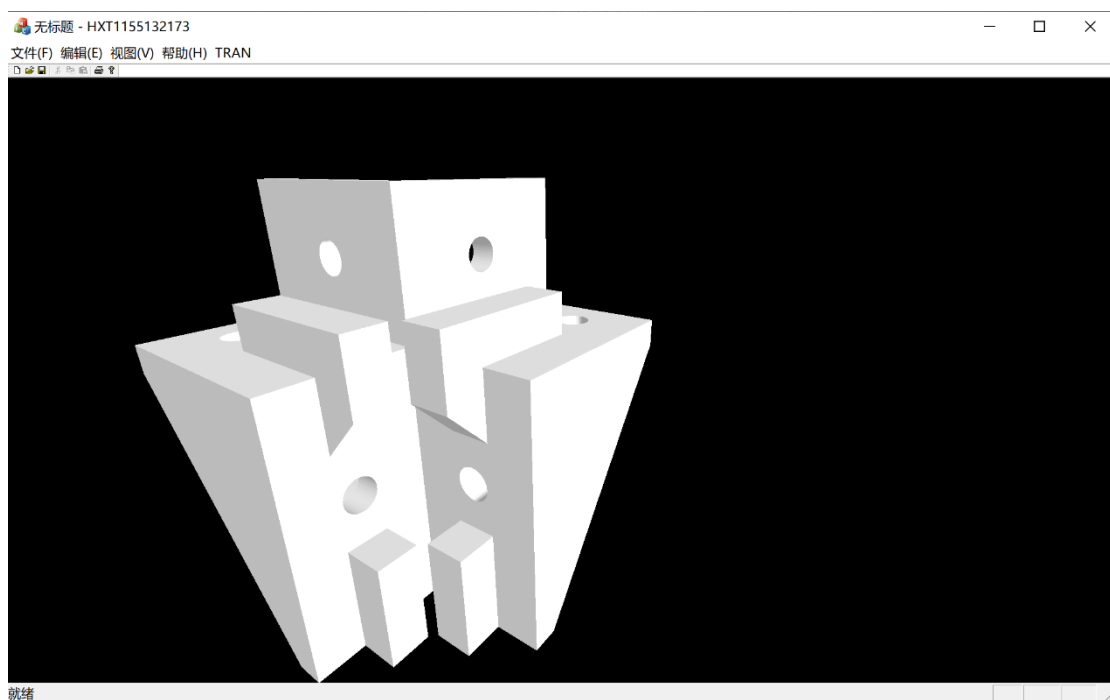

Second, Click“文件“, ”打开“, choose STL sample files and “打开”

Third, The 3D objects will show

Then, The base function of this program is to rotate, zoom, and pan using your mouse and keyboard UP, DOWN, LEFT and RIGHT.

If you want to open another STL files, you can follow the same procedures as mentioned before without closing the program. The former image will be erased once you open another STL files.

Finally, If you want to show the wireframe of 3D object, you can click “TRAN”, “LINE” button. If you want to show the shading 3D object, you can click “TRAN”, “FILL”.
